

Carnegie Mellon Univ.
School of Computer Science
15-415 - Database Applications

Lecture #5: *Relational Algebra*

Overview

- history
- concepts
- Formal query languages
 - relational algebra
 - rel. tuple calculus
 - rel. domain calculus

Faloutsos

CMU SCS 15-415

#2

History

- before: records, pointers, sets etc
- introduced by E.F. Codd in 1970
- revolutionary!
- first systems: 1977-8 (System R; Ingres)
- Turing award in 1981

Faloutsos

CMU SCS 15-415

#3

Concepts - reminder

- Database: a set of relations (= tables)
- rows: tuples
- columns: attributes (or keys)
- superkey, candidate key, primary key

Faloutsos

CMU SCS 15-415

#4

Example

Database:

STUDENT			SSN		
Ssn	Name	Address	c-id	grade	
123	smith	main str	15-413	A	
234	jones	forbes ave	15-413	B	

Faloutsos

CMU SCS 15-415

#5

Example: cont'd

Database:

STUDENT		
Ssn	Name	Address
123	smith	main str
234	jones	forbes ave

k-th attribute
(Dk domain)

rel. schema (attr+domains)
 ← tuple

Faloutsos

CMU SCS 15-415

#6

Example: cont'd

STUDENT		
Ssn	Name	Address
123	smith	main str
234	jones	forbes ave

rel. schema (attr+domains)

↑ instance

Faloutsos

CMU SCS 15-415

#7

Example: cont'd

- D_i : the domain of the i -th attribute (eg., char(10))

STUDENT		
Ssn	Name	Address
123	smith	main str
234	jones	forbes ave

rel. schema (attr+domains)

↑ instance

Faloutsos

CMU SCS 15-415

#8

Overview

- history
- concepts
- **Formal query languages**
 - relational algebra
 - rel. tuple calculus
 - rel. domain calculus

Faloutsos

CMU SCS 15-415

#9

Formal query languages

- How do we collect information?
- Eg., find ssn's of people in 415
- (recall: everything is a set!)
- One solution: Rel. algebra, ie., set operators
- Q1: Which ones??
- Q2: what is a minimal set of operators?

Faloutsos

CMU SCS 15-415

#10

Relational operators

- .
- .
- .
- set union \cup
- set difference $-$

Faloutsos

CMU SCS 15-415

#11

Example:

- Q: find all students (part or full time)
- A: PT-STUDENT union FT-STUDENT

FT-STUDENT			PT-STUDENT		
Ssn	Name	Address	Ssn	Name	Address
129	peters	main str	123	smith	main str
239	lee	5th ave	234	jones	forbes ave

Faloutsos

CMU SCS 15-415

#12

Observations:

- two tables are ‘union compatible’ if they have the same attributes (‘domains’)
- Q: how about intersection \cap

Faloutsos CMU SCS 15-415 #13

Observations:

- A: redundant:
- STUDENT intersection STAFF =

Faloutsos CMU SCS 15-415 #14

Observations:

- A: redundant:
- STUDENT intersection STAFF =

Faloutsos CMU SCS 15-415 #15

Observations:

- A: redundant:
- STUDENT intersection STAFF = STUDENT - (STUDENT - STAFF)

Faloutsos CMU SCS 15-415 #16

Observations:

- A: redundant:
- STUDENT intersection STAFF = STUDENT - (STUDENT - STAFF)

Double negation:

We’ll see it again, later...

Faloutsos CMU SCS 15-415 #17

Relational operators

- .
- .
- .
- set union \cup
- set difference ‘-’

Faloutsos CMU SCS 15-415 #18

Other operators?

- eg, find all students on 'Main street'
- A: 'selection'

$$\sigma_{address='mainstr'}(STUDENT)$$

STUDENT		
Ssn	Name	Address
123	smith	main str
234	jones	forbes ave

Faloutsos

CMU SCS 15-415

#19

Other operators?

- Notice: selection (and rest of operators) expect tables, and produce tables (-> can be cascaded!!)
- For selection, in general:

$$\sigma_{condition}(RELATION)$$

Faloutsos

CMU SCS 15-415

#20

Selection - examples

- Find all 'Smiths' on 'Forbes Ave'

$$\sigma_{name='Smith' \wedge address='Forbes ave'}(STUDENT)$$

'condition' can be any boolean combination of '=', '>', '>=', ...

Faloutsos

CMU SCS 15-415

#21

Relational operators

- selection $\sigma_{condition}(R)$
- .
- .
- set union $R \cup S$
- set difference $R - S$

Faloutsos

CMU SCS 15-415

#22

Relational operators

- selection picks rows - how about columns?
- A: 'projection' - eg.: $\pi_{ssn}(STUDENT)$

finds all the 'ssn' - removing duplicates

STUDENT		
Ssn	Name	Address
123	smith	main str
234	jones	forbes ave

Faloutsos

CMU SCS 15-415

#23

Relational operators

Cascading: 'find ssn of students on 'forbes ave'

$$\pi_{ssn}(\sigma_{address='forbes ave'}(STUDENT))$$

STUDENT		
Ssn	Name	Address
123	smith	main str
234	jones	forbes ave

Faloutsos

CMU SCS 15-415

#24

Relational operators

- selection $\sigma_{condition}(R)$
- projection $\pi_{att-list}(R)$
- .
- set union $R \cup S$
- set difference $R - S$

Faloutsos CMU SCS 15-415 #25

Relational operators

Are we done yet?
Q: Give a query we can **not** answer yet!

Faloutsos CMU SCS 15-415 #26

Relational operators

A: any query across **two** or more tables,
eg., ‘find names of students in 15-415’
Q: what extra operator do we need??

STUDENT			TAKES		
Ssn	Name	Address	SSN	c-id	grade
123	smith	main str	123	15-413	A
234	jones	forbes ave	234	15-413	B

Faloutsos CMU SCS 15-415 #27

Relational operators

A: any query across **two** or more tables,
eg., ‘find names of students in 15-415’
Q: what extra operator do we need??
A: surprisingly, cartesian product is enough!

STUDENT			TAKES		
Ssn	Name	Address	SSN	c-id	grade
123	smith	main str	123	15-413	A
234	jones	forbes ave	234	15-413	B

Faloutsos CMU SCS 15-415 #28

Cartesian product

- eg., dog-breeding: MALE x FEMALE
- gives all possible couples

MALE		FEMALE		
name		name		
spike	x	lassie	=	
spot		shiba		
		M.name		F.name
		spike		lassie
		spike	shiba	
		spot	lassie	
		spot	shiba	

Faloutsos CMU SCS 15-415 #29

so what?

- Eg., how do we find names of students taking 415?

STUDENT			SSN		
Ssn	Name	Address	c-id	grade	
123	smith	main str	123	15-415	A
234	jones	forbes ave	234	15-413	B

Faloutsos CMU SCS 15-415 #30

Cartesian product

- A: $\sigma_{STUDENT.ssn=TAKES.ssn}(STUDENT \times TAKES)$

Ssn	Name	Address	ssn	cid	grade
123	smith	main str	123	15-415	A
234	jones	forbes ave	123	15-415	A
123	smith	main str	234	15-413	B
234	jones	forbes ave	234	15-413	B

Faloutsos

CMU SCS 15-415

#31

Cartesian product

- $\sigma_{cid=15-415}(\sigma_{STUDENT.ssn=TAKES.ssn}(STUDENT \times TAKES))$

Ssn	Name	Address	ssn	cid	grade
123	smith	main str	123	15-415	A
234	jones	forbes ave	123	15-415	A
123	smith	main str	234	15-413	B
234	jones	forbes ave	234	15-413	B

Faloutsos

CMU SCS 15-415

#32

- $\pi_{name}(\sigma_{cid=15-415}(\sigma_{STUDENT.ssn=TAKES.ssn}(STUDENT \times TAKES)))$

Ssn	Name	Address	ssn	cid	grade
123	smith	main str	123	15-415	A
234	jones	forbes ave	123	15-415	A
123	smith	main str	234	15-413	B
234	jones	forbes ave	234	15-413	B

Faloutsos

CMU SCS 15-415

#33

FUNDAMENTAL Relational operators

- selection $\sigma_{condition}(R)$
- projection $\pi_{att-list}(R)$
- cartesian product MALE x FEMALE
- set union $R \cup S$
- set difference $R - S$

Faloutsos

CMU SCS 15-415

#34

Relational ops

- Surprisingly, they are enough, to help us answer almost any query we want!!
- derived/convenience operators:
 - set intersection
 - **join** (theta join, equi-join, natural join) \bowtie
 - 'rename' operator $\rho_R(R)$
 - division $R \div S$

Faloutsos

CMU SCS 15-415

#35

Joins

- Equijoin: $R \bowtie_{R.a=S.b} S = \sigma_{R.a=S.b}(R \times S)$

Faloutsos

CMU SCS 15-415

#36

Cartesian product

- A: $\dots \sigma_{STUDENT.ssn=TAKES.ssn} (STUDENT \times TAKES)$

Ssn	Name	Address	ssn	cid	grade
123	smith	main str	123	15-415	A
234	jones	forbes ave	123	15-415	A
123	smith	main str	234	15-413	B
234	jones	forbes ave	234	15-413	B

Faloutsos

CMU SCS 15-415

#37

Joins

- Equijoin: $R \bowtie_{R.a=S.b} S = \sigma_{R.a=S.b} (R \times S)$
- theta-joins: $R \bowtie_{\theta} S$
generalization of equi-join - any condition θ

Faloutsos

CMU SCS 15-415

#38

Joins

- **very** popular: natural join: $R \bowtie S$
- like equi-join, but it drops duplicate columns:
STUDENT (ssn, name, address)
TAKES (ssn, cid, grade)

Faloutsos

CMU SCS 15-415

#39

Joins

- **nat. join** has 5 attributes $STUDENT \bowtie TAKES$

Ssn	Name	Address	ssn	cid	grade
123	smith	main str	123	15-415	A
234	jones	forbes ave	123	15-415	A
123	smith	main str	234	15-413	B
234	jones	forbes ave	234	15-413	B

equi-join: 6 $STUDENT \bowtie_{STUDENT.ssn=TAKES.ssn} TAKES$

Faloutsos

CMU SCS 15-415

#40

Natural Joins - nit-picking

- if no attributes in common between R, S:
nat. join \rightarrow cartesian product

Faloutsos

CMU SCS 15-415

#41

Overview - rel. algebra

- fundamental operators
- derived operators
 - joins etc
 - **rename**
 - division
- examples

Faloutsos

CMU SCS 15-415

#42

Rename op.

- Q: why? ρ_{AFTER} (BEFORE)
- A: shorthand; self-joins; ...
- for example, find the grand-parents of 'Tom', given PC (parent-id, child-id)

Faloutsos

CMU SCS 15-415

#43

Rename op.

- PC (parent-id, child-id) $PC \bowtie PC$

PC		PC	
p-id	c-id	p-id	c-id
Mary	Tom	Mary	Tom
Peter	Mary	Peter	Mary
John	Tom	John	Tom

Faloutsos

CMU SCS 15-415

#44

Rename op.

- first, WRONG attempt:

$$PC \bowtie PC$$

- (why? how many columns?)

- Second WRONG attempt:

$$PC \bowtie_{PC.c-id=PC.p-id} PC$$

Faloutsos

CMU SCS 15-415

#45

Rename op.

- we clearly need two different names for the same table - hence, the 'rename' op.

$$\rho_{PC1}(PC) \bowtie_{PC1.c-id=PC.p-id} PC$$

Faloutsos

CMU SCS 15-415

#46

Overview - rel. algebra

- fundamental operators
- derived operators
 - joins etc
 - rename
 - **division**
- examples

Faloutsos

CMU SCS 15-415

#47

Division

- Rarely used, but powerful.
- Example: find suspicious suppliers, ie., suppliers that supplied **all** the parts in A_BOMB

Faloutsos

CMU SCS 15-415

#48

Division

SHIPMENT	
s#	p#
s1	p1
s2	p1
s1	p2
s3	p1
s5	p3

 \div

ABOMB
p#
p1
p2

 $=$

BAD_S
s#
s1

Faloutsos

CMU SCS 15-415

#49

Division

- Observations: ~reverse of cartesian product
- It can be derived from the 5 fundamental operators (!!)
- How?

Faloutsos

CMU SCS 15-415

#50

Division

- Answer:

$$r \div s = \pi_{(R-S)}(r) - \pi_{(R-S)}[(\pi_{(R-S)}(r) \times s) - r]$$

- Observation: find ‘good’ suppliers, and subtract! (**double negation**)

Faloutsos

CMU SCS 15-415

#51

Division

- Answer:

SHIPMENT	
s#	p#
s1	p1
s2	p1
s1	p2
s3	p1
s5	p3

 \div

ABOMB
p#

BAD_S
s#
s1

$$r \div s = \pi_{(R-S)}(r) - \pi_{(R-S)}[(\pi_{(R-S)}(r) \times s) - r]$$

- Observation: find ‘good’ suppliers, and subtract! (**double negation**)

Faloutsos

CMU SCS 15-415

#52

Division

- Answer:

$$r \div s = \pi_{(R-S)}(r) - \pi_{(R-S)}[(\pi_{(R-S)}(r) \times s) - r]$$

Faloutsos

CMU SCS 15-415

#53

Division

- Answer:

$$r \div s = \pi_{(R-S)}(r) - \pi_{(R-S)}[(\pi_{(R-S)}(r) \times s) - r]$$

Faloutsos

CMU SCS 15-415

#54

Division

- Answer:

SHIPMENT		ABOMB		BAD_S	
s#	p#	s#	p#	s#	p#
s1	p1	p1		s1	
s2	p1	p2			
s3	p2				
s4	p1				
s5	p3				

$$r \div s = \pi_{(R-S)}(r) - \pi_{(R-S)}[(\pi_{(R-S)}(r) \times s) - r]$$

Faloutsos

CMU SCS 15-415

#55

Division

- Answer:

SHIPMENT		ABOMB		BAD_S	
s#	p#	s#	p#	s#	p#
s1	p1	p1		s1	
s2	p1	p2			
s3	p2				
s4	p1				
s5	p3				

$$r \div s = \pi_{(R-S)}(r) - \pi_{(R-S)}[(\pi_{(R-S)}(r) \times s) - r]$$

Faloutsos

CMU SCS 15-415

#56

Overview - rel. algebra

- fundamental operators
- derived operators
 - joins etc
 - rename
 - division
- examples

Faloutsos

CMU SCS 15-415

#57

Sample schema

find names of students that take 15-415

STUDENT			CLASS		
Ssn	Name	Address	c-id	c-name	units
123	smith	main str	15-413	s.e.	2
234	jones	forbes ave	15-412	o.s.	2

TAKES		
SSN	c-id	grade
123	15-413	A
234	15-413	B

Faloutsos

CMU SCS 15-415

#58

Examples

- find names of students that take 15-415

Faloutsos

CMU SCS 15-415

#59

Examples

- find names of students that take 15-415

$$\pi_{name}[\sigma_{c-id=15-415}(STUDENT \bowtie TAKES)]$$

Faloutsos

CMU SCS 15-415

#60

Sample schema

find course names of 'smith'

STUDENT		
Ssn	Name	Address
123	smith	main str
234	jones	forbes ave

CLASS		
c-id	c-name	units
15-413	s.e.	2
15-412	o.s.	2

TAKES		
SSN	c-id	grade
123	15-413	A
234	15-413	B

Faloutsos CMU SCS 15-415 #61

Examples

- find course names of 'smith'

$$\pi_{c-name} [\sigma_{name='smith'} (\text{STUDENT} \bowtie \text{TAKES} \bowtie \text{CLASS})]$$

Faloutsos CMU SCS 15-415 #62

Examples

- find ssn of 'overworked' students, ie., that take 412, 413, 415

Faloutsos CMU SCS 15-415 #63

Examples

- find ssn of 'overworked' students, ie., that take 412, 413, 415: almost correct answer:

$$\sigma_{c-name=412} (TAKES) \cap \sigma_{c-name=413} (TAKES) \cap \sigma_{c-name=415} (TAKES)$$

Faloutsos CMU SCS 15-415 #64

Examples

- find ssn of 'overworked' students, ie., that take 412, 413, 415 - Correct answer:

$$\pi_{ssn} [\sigma_{c-name=412} (TAKES)] \cap \pi_{ssn} [\sigma_{c-name=413} (TAKES)] \cap \pi_{ssn} [\sigma_{c-name=415} (TAKES)]$$

Faloutsos CMU SCS 15-415 #65

Examples

- find ssn of students that work at least as hard as ssn=123, ie., they take all the courses of ssn=123, and maybe more

Faloutsos CMU SCS 15-415 #66

Sample schema

STUDENT			CLASS		
Ssn	Name	Address	c-id	c-name	units
123	smith	main str	15-413	s.e.	2
234	jones	forbes ave	15-412	o.s.	2

TAKES		
SSN	c-id	grade
123	15-413	A
234	15-413	B

Faloutsos

CMU SCS 15-415

#67

Examples

- find ssn of students that work at least as hard as ssn=123 (ie., they take all the courses of ssn=123, and maybe more)

$$[\pi_{ssn,c-id}(TAKES)] \div \pi_{c-id}[\sigma_{ssn=123}(TAKES)]$$

Faloutsos

CMU SCS 15-415

#68

Conclusions

- Relational model: only tables ('relations')
- relational algebra: powerful, minimal: 5 operators can handle almost any query!

Faloutsos

CMU SCS 15-415

#69
