

PGSS - Programming Lab
Task 1B about 30 minutes (or less)

_____ Open your Task1A.pde file and save it as Task1B.

_____ Modify your target (or create a new one) to use an (x, y) anchor point and two variables for the width and height of the target. **DO NOT USE width and height as variables - these are Processing variables that we will use later today. We must NEVER change them!**

_____ Be sure to save your code. We suggest you use the file name **Task1B**. Do not use any spaces in the name.
