

Biography:

Dimitris Pavlidis is a Program Director in Electronics, Photonics and Magnetic Devices (EPMD). He has been Research Professor at Boston University, Department of Electrical and Computer Engineering since 2012 and Adjunct Professor (2004 to present) of Electrical Engineering and Computer Science at the University of Michigan.

He has been Chaired Professor at Darmstadt University of Technology, Germany (2003 to 2011) and Director of International Relations of the Institute of Electronics, Microelectronics and Nanotechnology (IEMN), Lille, France since 2003. From 1986 to 2004 he was Professor of Electrical Engineering and Computer Science at the University of Michigan. During 1980-1985 he was Engineer and Manager of the GaAs Monolithic Microwave Integrated Circuits (MMIC) Department of Thomson-CSF, Corbeville, France. In 1980 he worked at the Central Electronic Engineering Research Institute, Pilani, India as a UNESCO consultant. In 1978 he joined the High Frequency Institute of the Technical University of Darmstadt, Germany. He worked as postdoctoral Fellow at Newcastle from 1976 to 1978.

Professor Pavlidis was a Visiting Scientist of the Centre National d'Études des Télécommunications (CNET)/France Telecom in Bagneux, France (1993) and a Visiting Professor at the University of Hokkaido, Sapporo Japan (1992), Meijo University, Nagoya, Japan (2000) and the University of Western Australia, Perth, Australia (2000).

He received the B.Sc. degree in Physics from the University of Patras, Patras Greece in 1972 and the Ph.D. degree in Applied Science/Electronic Engineering from the University of Newcastle, Newcastle-upon-Tyne in 1976.

His research involves various types of semiconductor materials, devices, circuits, nanostructures and sensors and has applications in the electronic and biological, biomedical fields. His research covers microwave/ millimeter-wave monolithic heterostructure integrated circuits built with such devices, MEMS and sensors based on III-Vs, II-VIs and Carbon Nanotubes. His work in the above areas has been reported in numerous papers and reports and he holds seven patents.

Professor Pavlidis was awarded in 1990 the European Microwave prize for his work in InP based monolithic integrated HEMT amplifiers. In 1991 he received the decoration of "Palme Académiques" in the order of Chevalier by the French Ministry of Education for his work in education. In 1992 and 1999 he received the Japan Society of Promotion of Science Fellowship for Senior Scientists/Professors from the Japanese Government and in 1992 the Humboldt Research Award for Distinguished senior US Scientists. He is the recipient of the University of Michigan 1994 Electrical Engineering and Computer Science and 1996 College of Engineering Research Excellence Awards and co-recipient of the 2005 GAAS European Microwave Week Award for his work on wideband GaN-based MMIC low-noise amplifiers for transceiver front-ends. He has been responsible for initiating and directing various international programs involving research and academic partnerships between European and US, Singapore and China universities. Funding for these programs was provided by the European Commission and the Department of Education and/or Research of the partner countries.
