2 What You Have Accomplished Since Your Last Meeting?
Worked with Nathan and Elliot to debug the implementation of the memory services AVL lookup. Everything looks like it is working (for now). Also modelled how the memory services should work under different distributions (normal and zipfian) and have seen a significant theoretical increase.

3 Meeting your milestone
Yes

4 Surprises
No surprises.... yet

5 Looking Ahead
Chase down the sources of discrepancies between theoretical model and the actual simulation, and hopefully be able to prove that the memory services model is a good model so that we can proceed to writing the message passing queue
