Legend:

Indicate whether the following argument is valid or invalid.

Start by classifying each row of the truth-table for the argument as either providing a counterexample, or not, using the buttons to the right of the table. Once all rows have been classified, click the appropriate button below to indicate whether or not the argument is valid.

The argument above is invalid, and has counterexamples, indicated in blue. All blue rows should be marked "yes", and all other rows should be marked "no" to be correct. NB: The rows in the final product should all be black - the colour is just to indicate the correct answers.
