Wall Street Journal	85.1	76.4	81.9
Washington Post	66.6	57.2	62.9
Washington Times	35.4	28.4	32.4
Average	62.6	53.7	59.2

Table 2: ADA estimates of media outlets using data from 1990 through 2004. The first column presents the Groseclose and Milyo (2005) published results from a pooled analysis including forty-four actual think tanks and six mega think tanks. The second column presents the exact same analysis but excluding all observations from the National Taxpayers Union (NTU). The third column presents the same analysis using all observations except those from the NTU in 1995. The National Taxpayers Union is the most frequently cited policy group by members of Congress in the data and accounts for nearly six percent of the total Congressional citation data. Excluding NTU observations yields estimates of media outlets that are on average nearly nine points more conservative on the ADA scale than the original Groseclose and Milyo (2005) results. Using all observations except citations of NTU in 1995 yields estimates on average over three points lower on the ADA scale.
