

48-747 Shape Grammars

Spring Semester 9 units • UT 3.00-4.20 • CMB 2147

Instructor: Ramesh Krishnamurti ramesh@cmu.edu

Course Website:

<http://www.andrew.cmu.edu/user/ramesh/teaching/course/48-747/>

(under construction)

To introduce spatial grammars and their applications, primarily to design and composition.

Emphases on the formal and informal aspects of grammars, evolution of grammatical ideas, their relevance, application and use in the analyses of 'styles', synthesis of 'form', and incorporation of 'function', and not least, in teaching grammars to a computer.

Shape grammars, will be examined in detail.

For nearly four decades, grammars have been used extensively to understand styles of architecture, landscape design, fine art and ornament.

course objectives

Fundamental notions of grammars and rewriting systems, languages of grammars

Introduction to shape grammars and their properties

Transformations of grammars

Other kinds of spatial grammars

e.g., structure, solid grammars, graph and color grammars

Application of grammars to aspects of architecture and urban design

Application of grammars to other disciplines

Weights, sorts and augmented spatial grammars

Implementing shape grammars [and other spatial grammars]

Recent trends in grammar research

Other topics suggested by students

course topics

Students will be *evaluated* on a full semester course (worth 9 units).

Students will be *initially evaluated* for a mini course (worth 6 units) made up of assignments.

The project and any accompanying preparatory assignments will be worth an additional 3 units.

course credit

Grammar assignments (5 units)

In class participation (1 unit)

First

Project + any preparatory assignment (3 units)

OR

Computational assignment (3 units)

Second

Required of all CD graduate students

assignments

Reflection of your affinity and flair for the subject matter.

A 90+ **B** 80+ **C** 70+

A (excellent) means that you have scored at least B or better in each assignment.

B (good) means that you have at least successfully completed each assignment.

C means you do not fail the course, and you either you performed uniformly, or poorly in one of the assignments.

grading

Course geared towards everyone doing well

Have a tendency to mark *hard assignments leniently* and *easy assignments hard*.

Written parts for any assignments must be *grammatical*.

Drawn parts for any assignment must be *neat* (if you can't freehand neatly, use a computer drawing program).

Programmed parts or algorithms for any assignment must have *a clear logic*
