

Site/Parti/Materials

Project II
Galford Studio
1 March 2006

For Wednesday,

1/8" schematic plan showing your basic moves on site. Indicate site extents.

Be prepared to talk about how you view the appropriate approach to how a building sits on the site, how the major spaces feel, and how the building interacts with the site. Use the criteria we discussed today regarding what the patron of the library needs. Think of the different senses and how they react to their environment.

3/4" wall section/building section showing your thoughts about materials.

Think about the types of materials that you envision. This is a schematic drawing, but begins a dialogue. Thinking about materials must accompany thinking about form.
