Project II  
Galford Studio  
22 March 2006

Guys,

For **Wednesday**, have a **1/8" model** and **1/4" plan and building section**. Have supporting **sketches and diagrams**. Be prepared to defend your approach. Start a **3/4" wall section** through a **principal wall** that shows the range of materials and their connection. Be able to explain.

**Reading:** Read the Morris article supplied by Caitlin. Have some comments ready. Think of his view regarding the use of materials. Think of the lecture last night and how they approached materials in their work. How did their material investigations support their design approach? Any interaction with what you are trying to achieve?
