Project requirements _____

Quality attributes _____

Issues _____

Risks _____

I believe this team can meet the project goals with this _____
architecture

The architecture shows good use of:

Coupling _____

Cohesion _____

My unanswered questions

Comments

- Note any places where the architecture does not satisfy the architecturally significant requirements and issues, and why it does not
- Note any high priority risks that are not addressed in the architecture or do not have a mitigation plan
- Identify any questions you have that were not answered
- Identify any assumptions that the project team has made that may not be true, or that may not stay true throughout the project
- Identify the good points of the architecture and the parts of the architecture that should not change
