Dear Teradyne Recruiter,

I am writing to apply for the Software Engineer Intern position at Teradyne. As a second-year Electrical and Computer Engineering student at Carnegie Mellon University, I have a strong passion for the software industry. I am very interested in bringing the following skills this summer to Teradyne:

- **Analytical and collaboration skills:** During my first summer at Carnegie Mellon University, I worked on a team project involving Data Storage. In the project, I was able to learn a lot about the general structure and hardware of a computer. Through this project, my partner and I were able to use our analytical and collaboration skills to come up with different testing procedures and execute it in the classroom. This project taught us how valuable and important efficiency is, in terms of storage, and how to work well in a team.
- **Personability and communication skills:** During my time in my Fundamentals of Programming and Computer Science course (15-112), I excelled so much that I got assigned to be a partner tutor. As a partner tutor, I would work with fellow students who were struggling with the content and help them understand it more. Through this experience, I was able to gain valuable personable traits while also enhancing my understanding of the content. This led me to become an official peer tutor for the Fall 2022 semester!

I look forward to the opportunity to discuss my qualifications as outlined in the attached resume, and how I could help Teradyne's mission. Please feel free to contact me with any questions. Thank you for your time and consideration.

Sincerely,

Arda Akinci
