What Have You Accomplished So Far?
So far, I am still working on the same convolution unit as prior. Although, at this point, we have gone through extensive review, and know exactly what is needed. I have gone and implemented parts of it (the discrete, separate parts of the design), but now I have to link the pieces together. This step requires a large amount of precise control, and timing, and it’s been taking me a bit of time to actually be able to get these together. After I get this working, I’m going to attempt to integrate with the entire system, since this design and implementation stage is me working on a compartmentalized thing. Basically, I just need to get it working on a small set of assumptions, and it’ll be very easy to integrate with everything else.
