## Virtual Andrew

Virtual Andrew provides remote access to a Windows cluster computer with a variety of academic software. The applications do not need to be installed on your personal computer. Virtual Andrew can be accessed from Windows, Mac, iOS and Android operating systems. For a list of software available through Virtual Andrew, see the Virtual Andrew column of the [Specialty Software chart](#).

To use Virtual Andrew, please follow the steps for your operating system or device:

- [Windows XP+](#)
- [Mac OS X 10.6+](#)
- [Android 2.2+](#)
- [iOS 4.2+](#)
- [Frequently Asked Questions](#)

## 1. INTRODUCTION

This is an introduction to my first L<sup>A</sup>T<sub>E</sub>X document.

## 2. ABOUT THIS DOCUMENT

Sections and subsections are described below.

2.1. **Section description.** Sections are bigger than subsections.

2.2. **Subsection description.** Subsections are smaller than sections.[3][2][1]

## 3. MORE\_STUFF

This is my second L<sup>A</sup>T<sub>E</sub>X document!

Lyx is better than other word processors because:

**Typesetting:** is done for you.

**Math:** is WYSIWYG

**Lists:** are very easy to create!

**READ Exhibit**

## Global Communication Center

Make an **appointment** for help on writing and presentations. The GCC is located on the first floor of Hunt Library.

## APC Fund for Authors

The Libraries have created a fund to help Carnegie Mellon authors pay Article Processing Charges (APC) to publish in open access journals – offering up to \$1,500 per article, with a cap of \$3,000 per author per fiscal year. Ideally, the corresponding author's department will also contribute to paying the APC.

## Copyright & Fair Use – New Resources

Copyright and Plagiarism covers [Using Other People's Copyrighted Work](#) and [Managing Your Own Copyrighted Work](#).

CMU's succinct updated [Fair Use Policy](#) (April 2013) recommends balancing fair use factors 'in the light of purposes of copyright' and describes academic best practices for fair use.

## A Personal Note on Oklahoma

A note from Gloriana St. Clair's college roommate, Theresa Jaye, in Oklahoma:

I woke to the sound of thunder at 5:13 am – no one in okieland today could go back to sleep hearing that rumbling. as i rose, i could see sharp, white lightning splitting the clouds, and the bob seger line went with me as i found the morning weather report: "woke last night to the sound of thunder, how far off, i sat and wonder, starting humming a tune from 1962"

Augmented Reality has now progressed to the point where real-time applications are being considered and needed. At the same time it is important that synthetic elements are rendered and aligned in the scene in an accurate and visually acceptable way. In order to address these issues a real-time, robust and efficient 3D model-based tracking algorithm is proposed for a 'video see through' monocular vision system. The tracking of objects in the scene amounts to calculating the pose between the camera and the objects. Virtual objects can then be projected into the scene using the pose. Here, non-linear pose computation is formulated by means of a virtual visual servoing approach. In this context, the derivation of point-to-curves interaction matrices are given for different features including lines, circles, cylinders and spheres. A local moving edges tracker is used in order to provide real-time tracking of points normal to the object contours. A method is proposed for combining local position uncertainty and global pose uncertainty in an efficient and accurate way by propagating uncertainty. Robustness is obtained by integrating a M-estimator into the visual control law via an iteratively re-weighted least squares implementation. The method presented in this paper has been validated on several complex image sequences including outdoor environments. Results show the method to be robust to occlusion, changes in illumination and miss-tracking.
