Major Changes: There have been no major changes in the scope of my project.

What I Have Accomplished Since My Last Meeting: My mentor and I discussed a new idea for one round of non-adaptivity. This is somewhat like an improved version of a previous idea in some ways, in that it involves first showing that with high probability, for any pair of thetas, there is some trial at which they are distinguishable.

Meeting Your Milestone: I have met my milestone of thinking more deeply about a promising idea.

Surprises: Campus closing down was a pretty big surprise… Due to this, over the last week, I’ve not had as much time as I’d have liked to work on the problem as I was occupied with travel plans and moving out.

Looking Ahead: Right now, the algorithm intuitively seems to makes sense. The next step is to work out the math behind this algorithm and try to prove that it works (or, if it doesn’t, show that).

Revisions to Your Future Milestones: I don’t have any revisions to future milestones.

Resources Needed: I have all of the resources I need to complete my 15-400 project.
