

User Guide

The followings are the user guide to help you use our software step by step.

Step1: Download the TScanner.exe

If you cannot execute the TScanner.exe, download the TScanner.zip which contains the JRE to execute the software.

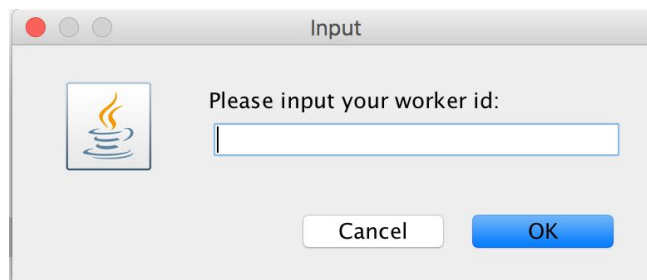

Step2: Execute the software by double clicking the TScanner.exe.

(If you download the zip file, unzip it first, and open the TScanner folder, and execute the TScanner.exe. Please do not move the TScanner.exe file outside of the folder.)

Step3: Input your work ID, which is displayed on the website.

(<http://www.andrew.cmu.edu/user/xzheng2/TScanner/index.html>)

If you have input it before, you do not need to input it again.

You can edit the work ID in the Settings.

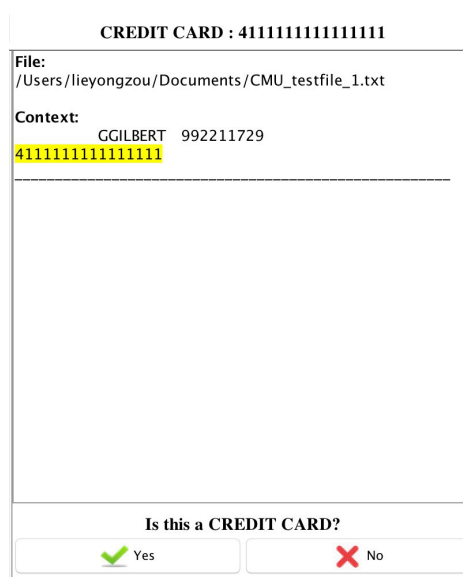

Step4: Click “Scan” Button, then you can leave it in the background. All work will be executed in background without influencing your daily work. When it finishes, a dialog will remind you that all match work have been finished.

Please do not close the window, when running the software.

Step5: Evaluate all data

Click the data (e.g. 4111111111111111) and some information about the data are displayed on the right, like the following screenshot.

You can choose “Yes” or “No” to evaluate this data with the assistance of context around the data.

Step6: When you evaluate all data, you can click the “Report” Button to generate the report. You can customize the folder to save the report.

Step7: Send the report to us, the email address is lieyongz@andrew.cmu.edu. The report contains no sensitive data.

Step8: We will email you \$9 Amazon Gift Card within a short time.
